研究設計

本網站為是項研究的主要門戶。獲轉介的參加者首先在本網站登記以及完成問卷後，可申請一份以速遞送達的愛滋自我檢測套裝。

領取套裝後，參加者可以於一個私隱得到保障的環境，按照套裝內的指示進行自我檢測。參加者可於申請套裝時預約時間讓研究人員提供即時網上或親身協助。

完成檢測後，參加者需要拍攝結果並上載至本網站，研究人員會為參加者確認結果。有需要時研究人員會提供轉介和相關資訊。確認結果後參加者將會得到港幣20元價值的禮券。

在完成網上訓練後，參加者可以轉介其朋輩參加本研究，成功轉介一位參加者(完成自我檢測而且測試結果已由研究人員確認)將會獲得額外港幣20元價值的禮券，上限五位。

Study Design

This website serves as the main portal for this study. Referred participants first register in this website and complete the questionnaire, then are able to apply for a HIV self-test kit and have it received by courier.

After collecting the test kit, participants can perform the test according to the instructions inside the kit in an environment where privacy is protected. Participants requiring instant online or in-person support can so request at the time of requesting the test kit.

After completing the self-test, participants are asked to take a picture of the result and upload it to this website so that the result could be verified. After verification, participants would receive a HK\$20 voucher.

Participants could refer their peers to join this study after completing online training. Participants would receive an extra HK\$20 voucher for every, but not more than five, successful referral which includes completion of self-test and result verification.

參加資格

參加者須：

1. 為十八歲或以上男性、曾與男性發生性行為
2. 在港居住
3. 能閱讀中或英文

HIV 抗體測試需要在空窗期後進行才能準確反映感染狀況。空窗期是由受到感染起計，直至身體產生足夠抗體至可被偵測水平，一般最長為三個月。在空窗期內檢測呈陰性並不代表沒有感染病毒，只是身體未產生足夠抗體。因此，你應該在發生令你擔心的行為的日期起計三個月後再做一次測試。快速測試能在短時間內提供結果作參考，但陽性結果需要由實驗室測試確認。服用事前或事後預防用藥(PrEP/PEP)或抗愛滋病毒藥物可能會影響測試結果。因此一般不建議服用此等藥物的人士使用快速測試，而陰性結果不一定準確。

此研究計劃提供免費的自我檢測套裝。請按此閱讀更多關於自我檢測的資訊。

About HIV/AIDS
AIDS (Acquired Immunodeficiency Syndrome) is a disease caused by a virus called HIV (Human Immunodeficiency Virus).
HIV infection has to be contrasted with AIDS. After infection, the virus

你需要答對70%的題目才能進入下一階段
You need to obtain at least 70% to proceed to the next stage.
本網上訓練的答案可以在本頁左邊部份找到。
Answers can be found on the left hand side on this page.

以下哪個關於HIV和AIDS的描述是正確的? Which option correctly describes HIV/AIDS?

- HIV和AIDS是兩種不同的疾病。 HIV and AIDS are different diseases.
- HIV感染者一定會成為愛滋病患者。 All people living with HIV will become AIDS patients.
- HIV可被根治但AIDS不能夠。 HIV can be cured but AIDS cannot.
- 按醫囑服藥能避免病變成愛滋病。 Adhering to treatment can prevent developing to AIDS.

以下哪個情況有感染HIV的風險? Which scenario has an HIV infection risk?

- 沒有使用安全套為他人手淫 Masturbate for others without condom
- 接吻 Kiss
- 使用對方精液手淫 Masturbate with other's semen
- 蚊叮蟲咬 Insect bites

感染者若能維持病毒數量在無法被偵測的水平半年或以上，透過性接觸傳播HIV的風險為多少? What is the sexual transmission risk of HIV if the person living with HIV has been maintaining undetectable viral load for at least half a year?

- 0%
- 25%
- 50%
- 100%

以下哪項關於事前預防用藥(PrEP)的描述是不正確的? Which of the following
