CONSORT-EHEALTH (V 1.6.1) - Submission/Publication Form

The CONSORT-EHEALTH checklist is intended for authors of randomized trials evaluating web-based and Internet-based applications/interventions, including mobile interventions, electronic games (incl multiplayer games), social media, certain telehealth applications, and other interactive and/or networked electronic applications. Some of the items (e.g. all subitems under item 5 - description of the intervention) may also be applicable for other study designs.

The goal of the CONSORT EHEALTH checklist and guideline is to be
a) a guide for reporting for authors of RCTs,
b) to form a basis for appraisal of an ehealth trial (in terms of validity)

CONSORT-EHEALTH items/subitems are MANDATORY reporting items for studies published in the Journal of Medical Internet Research and other journals / scientific societies endorsing the checklist.

Items numbered 1., 2., 3., 4a., 4b etc are original CONSORT or CONSORT-NPT (non-pharmacologic treatment) items.
Items with Roman numerals (i., ii, iii, iv etc.) are CONSORT-EHEALTH extensions/clarifications.

As the CONSORT-EHEALTH checklist is still considered in a formative stage, we would ask that you also RATE ON A SCALE OF 1-5 how important/useful you feel each item is FOR THE PURPOSE OF THE CHECKLIST and reporting guideline (optional).

Mandatory reporting items are marked with a red *.
In the textboxes, either copy & paste the relevant sections from your manuscript into this form - please include any quotes from your manuscript in QUOTATION MARKS,
or answer directly by providing additional information not in the manuscript, or elaborating on why the item was not relevant for this study.

YOUR ANSWERS WILL BE PUBLISHED AS A SUPPLEMENTARY FILE TO YOUR PUBLICATION IN JMIR AND ARE CONSIDERED PART OF YOUR PUBLICATION (IF ACCEPTED).
Please fill in these questions diligently. Information will not be copyedited, so please use proper spelling and grammar, use correct capitalization, and avoid abbreviations.

DO NOT FORGET TO SAVE AS PDF _AND_ CLICK THE SUBMIT BUTTON SO YOUR ANSWERS ARE IN OUR DATABASE !!!

Citation Suggestion (if you append the pdf as Appendix we suggest to cite this paper in the caption):

* Required

Your name *

First Last

Octavia Zahrt

Primary Affiliation (short), City, Country *

University of Toronto, Toronto, Canada

Stanford University, Stanford, CA, USA

Your e-mail address *

abc@gmail.com

zahrt@stanford.edu

Title of your manuscript *

Provide the (draft) title of your manuscript.

Effects of Wearable Fitness Trackers and Activity Adequacy Mindsets on Affect, Behavior and Health: A Longitudinal Randomized Controlled Trial

Name of your App/Software/Intervention *

If there is a short and a long/alternate name, write the short name first and add the long name in brackets.

AccuSteps app; meta-mindset intervention

Evaluated Version (if any)

e.g. "V1", "Release 2017-03-01", "Version 2.0.27913"

Your answer

Language(s) *

What language is the intervention/app in? If multiple languages are available, separate by comma (e.g. "English, French")

English

URL of your Intervention Website or App

e.g. a direct link to the mobile app on app in appstore (itunes, Google Play), or URL of the website. If the intervention is a DVD or hardware, you can also link to an Amazon page.

Your answer

URL of an image/screenshot (optional)

Your answer

Accessibility *

Can an enduser access the intervention presently?

- ○ access is free and open
- ○ access only for special usergroups, not open
- ○ access is open to everyone, but requires payment/subscription/in-app purchases
- ◉ app/intervention no longer accessible
- ○ Other:

Primary Medical Indication/Disease/Condition *

e.g. "Stress", "Diabetes", or define the target group in brackets after the condition, e.g. "Autism (Parents of children with)", "Alzheimers (Informal Caregivers of)"

Physical inactivity

Primary Outcomes measured in trial *

comma-separated list of primary outcomes reported in the trial

Changes over 5 weeks in perceived amount of

Secondary/other outcomes

Are there any other outcomes the intervention is expected to affect?

Changes over 5 weeks in affect, physical activity (step count and self-reported), other health behaviors (diet, alcohol, smoking)

Recommended "Dose" *

What do the instructions for users say on how often the app should be used?

- (●) Approximately Daily
- ( ) Approximately Weekly
- ( ) Approximately Monthly
- ( ) Approximately Yearly
- ( ) "as needed"
- ( ) Other:

Approx. Percentage of Users (starters) still using the app as recommended after 3 months *

- (●) unknown / not evaluated
- ( ) 0-10%
- ( ) 11-20%
- ( ) 21-30%
- ( ) 31-40%
- ( ) 41-50%
- ( ) 51-60%
- ( ) 61-70%
- ( ) 71%-80%
- ( ) 81-90%
- ( ) 91-100%
- ( ) Other:

Overall, was the app/intervention effective? *

- ○ yes: all primary outcomes were significantly better in intervention group vs control
- ◉ partly: SOME primary outcomes were significantly better in intervention group vs control
- ○ no statistically significant difference between control and intervention
- ○ potentially harmful: control was significantly better than intervention in one or more outcomes
- ○ inconclusive: more research is needed
- ○ Other:

Article Preparation Status/Stage *

At which stage in your article preparation are you currently (at the time you fill in this form)

- ○ not submitted yet - in early draft status
- ◉ not submitted yet - in late draft status, just before submission
- ○ submitted to a journal but not reviewed yet
- ○ submitted to a journal and after receiving initial reviewer comments
- ○ submitted to a journal and accepted, but not published yet
- ○ published
- ○ Other:

Journal *

If you already know where you will submit this paper (or if it is already submitted), please provide the journal name (if it is not JMIR, provide the journal name under "other")

- ○ not submitted yet / unclear where I will submit this
- ◉ Journal of Medical Internet Research (JMIR)
- ○ JMIR mHealth and UHealth
- ○ JMIR Serious Games
- ○ JMIR Mental Health
- ○ JMIR Public Health
- ○ JMIR Formative Research
- ○ Other JMIR sister journal
- ○ Other:

Is this a full powered effectiveness trial or a pilot/feasibility trial? *

- ◉ Pilot/feasibility
- ○ Fully powered

Manuscript tracking number *

If this is a JMIR submission, please provide the manuscript tracking number under "other" (The ms tracking number can be found in the submission acknowledgement email, or when you login as author in JMIR. If the paper is already published in JMIR, then the ms tracking number is the four-digit number at the end of the DOI, to be found at the bottom of each published article in JMIR)

- ◉ no ms number (yet) / not (yet) submitted to / published in JMIR
- ○ Other:

TITLE AND ABSTRACT

1a) TITLE: Identification as a randomized trial in the title

1a) Does your paper address CONSORT item 1a? *

I.e does the title contain the phrase "Randomized Controlled Trial"? (if not, explain the reason under "other")

- (●) yes
- ( ) Other:

1a-i) Identify the mode of delivery in the title

Identify the mode of delivery. Preferably use “web-based” and/or “mobile” and/or “electronic game” in the title. Avoid ambiguous terms like “online”, “virtual”, “interactive”. Use “Internet-based” only if Intervention includes non-web-based Internet components (e.g. email), use “computer-based” or “electronic” only if offline products are used. Use “virtual” only in the context of “virtual reality” (3-D worlds). Use “online” only in the context of “online support groups”. Complement or substitute product names with broader terms for the class of products (such as “mobile” or “smart phone” instead of “iphone”), especially if the application runs on different platforms.

	1	2	3	4	5	
subitem not at all important	( )	( )	(●)	( )	( )	essential

Clear selection

Does your paper address subitem 1a-i? *

Copy and paste relevant sections from manuscript title (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

"Wearable Fitness Trackers"

1a-ii) Non-web-based components or important co-interventions in title

Mention non-web-based components or important co-interventions in title, if any (e.g., “with telephone support”).

	1	2	3	4	5	
subitem not at all important	○	○	◉	○	○	essential

Clear selection

"Activity Adequacy Mindsets"

1a-iii) Primary condition or target group in the title

Mention primary condition or target group in the title, if any (e.g., “for children with Type I Diabetes”) Example: A Web-based and Mobile Intervention with Telephone Support for Children with Type I Diabetes: Randomized Controlled Trial

	1	2	3	4	5	
subitem not at all important	○	○	◉	○	○	essential

Clear selection

Does your paper address subitem 1a-iii? *

Copy and paste relevant sections from manuscript title (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

This research does not target a particular condition or group. Instead it aims to examine how physical activity and health can be promoted in a general population. Thus, this is not included in the title.

1b) ABSTRACT: Structured summary of trial design, methods, results, and conclusions

NPT extension: Description of experimental treatment, comparator, care providers, centers, and blinding status.

1b-i) Key features/functionalities/components of the intervention and comparator in the METHODS section of the ABSTRACT

Mention key features/functionalities/components of the intervention and comparator in the abstract. If possible, also mention theories and principles used for designing the site. Keep in mind the needs of systematic reviewers and indexers by including important synonyms. (Note: Only report in the abstract what the main paper is reporting. If this information is missing from the main body of text, consider adding it)

	1	2	3	4	5	
subitem not at all important	○	○	○	◉	○	essential

Clear selection

Does your paper address subitem 1b-i? *

Copy and paste relevant sections from the manuscript abstract (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

"Participants received an Apple Watch to wear for 5 weeks, which was equipped with an app that recorded step count and could display a (potentially manipulated) step count on the watch face. After a baseline week of receiving no feedback about step count, participants were randomly assigned to one of four experimental groups: they received either (1) accurate step count (reference group, n = 41), 40% deflated step count (n = 40), 40% inflated step count (n = 40), or accurate step count + a web-based meta-mindset intervention teaching participants the value of adopting more positive AAMs (n = 41)."

1b-ii) Level of human involvement in the METHODS section of the ABSTRACT

Clarify the level of human involvement in the abstract, e.g., use phrases like “fully automated” vs. “therapist/nurse/care provider/physician-assisted” (mention number and expertise of providers involved, if any). (Note: Only report in the abstract what the main paper is reporting. If this information is missing from the main body of text, consider adding it)

	1	2	3	4	5	
subitem not at all important	○	○	○	○	○	essential

Does your paper address subitem 1b-ii?

Copy and paste relevant sections from the manuscript abstract (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

The methods section of the abstract makes it clear that interventions were delivered via the Apple Watch app and through a web-based intervention. We thus did not consider it necessary to clarify that there was no human involvement.

1b-iii) Open vs. closed, web-based (self-assessment) vs. face-to-face assessments in the METHODS section of the ABSTRACT

Mention how participants were recruited (online vs. offline), e.g., from an open access website or from a clinic or a closed online user group (closed usergroup trial), and clarify if this was a purely web-based trial, or there were face-to-face components (as part of the intervention or for assessment). Clearly say if outcomes were self-assessed through questionnaires (as common in web-based trials). Note: In traditional offline trials, an open trial (open-label trial) is a type of clinical trial in which both the researchers and participants know which treatment is being administered. To avoid confusion, use “blinded” or “unblinded” to indicated the level of blinding instead of “open”, as “open” in web-based trials usually refers to “open access” (i.e. participants can self-enrol). (Note: Only report in the abstract what the main paper is reporting. If this information is missing from the main body of text, consider adding it)

	1	2	3	4	5	
subitem not at all important	○	○	○	○	○	essential

Does your paper address subitem 1b-iii?

Copy and paste relevant sections from the manuscript abstract (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

"162 community-dwelling adults were recruited via flyers and online platforms (i.e., Craigslist, Nextdoor; final sample size after attrition/ exclusion of 45 participants). Participants received an Apple Watch to wear for 5 weeks, which was equipped with an app that recorded step count and could display a (potentially manipulated) step count on the watch face. After a baseline week of receiving no feedback about step count, participants were randomly assigned to one of four experimental groups: they received either (1) accurate step count (reference group, n = 41), 40% deflated step count (n = 40), 40% inflated step count (n = 40), or accurate step count + a web-based meta-mindset intervention teaching participants the value of adopting more positive AAMs (n = 41). Participants were blinded to condition. Outcome measures were taken in lab by an experimenter in the beginning and end of participation, and via web-based surveys in between."

1b-iv) RESULTS section in abstract must contain use data

Report number of participants enrolled/assessed in each group, the use/uptake of the intervention (e.g., attrition/adherence metrics, use over time, number of logins etc.), in addition to primary/secondary outcomes. (Note: Only report in the abstract what the main paper is reporting. If this information is missing from the main body of text, consider adding it)

	1	2	3	4	5	
subitem not at all important	○	○	○	○	○	essential

Does your paper address subitem 1b-iv?

Copy and paste relevant sections from the manuscript abstract (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

"162 community-dwelling adults were recruited via flyers and online platforms (i.e., Craigslist, Nextdoor; final sample size after attrition/ exclusion of 45 participants)."
"After a baseline week of receiving no feedback about step count, participants were randomly assigned to one of four experimental groups: they received either (1) accurate step count (reference group, n = 41), 40% deflated step count (n = 40), 40% inflated step count (n = 40), or accurate step count + a web-based meta-mindset intervention teaching participants the value of adopting more positive AAMs (n = 41)."

1b-v) CONCLUSIONS/DISCUSSION in abstract for negative trials

Conclusions/Discussions in abstract for negative trials: Discuss the primary outcome - if the trial is negative (primary outcome not changed), and the intervention was not used, discuss whether negative results are attributable to lack of uptake and discuss reasons. (Note: Only report in the abstract what the main paper is reporting. If this information is missing from the main body of text, consider adding it)

	1	2	3	4	5	
subitem not at all important	○	○	○	○	○	essential

Does your paper address subitem 1b-v?

Copy and paste relevant sections from the manuscript abstract (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

"Participants receiving accurate step count perceived their activity as more adequate and healthier, adopted a healthier diet, and experienced improved mental health (PROMIS-29) and aerobic capacity, but also reduced functional health (PROMIS-29) (compared to their no-step-count baseline). Participants exposed to deflated steps perceived their activity as more inadequate, ate more unhealthily and experienced more negative affect, reduced self-esteem and mental health, and increased blood pressure and heart rate (compared to participants receiving accurate steps). Inflated steps did not change AAM and most other outcomes (compared to accurate steps). Participants receiving the meta-mindset intervention experienced improved AAM, affect, functional health, and self-reported physical activity (compared to participants receiving accurate steps only). Actual step count did not change in either condition."
Some possible explanations for negative outcomes are discussed in the paper, but as those are speculative, we are not including them in the abstract.

INTRODUCTION

2a) In INTRODUCTION: Scientific background and explanation of rationale

2a-i) Problem and the type of system/solution

Describe the problem and the type of system/solution that is object of the study: intended as stand-alone intervention vs. incorporated in broader health care program? Intended for a particular patient population? Goals of the intervention, e.g., being more cost-effective to other interventions, replace or complement other solutions? (Note: Details about the intervention are provided in “Methods” under 5)

Does your paper address subitem 2a-ii? *

Copy and paste relevant sections from the manuscript (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

"Mindsets are our core assumptions regarding a domain or category (e.g., intelligence, healthy eating, stress, physical activity) [14, 15]. They help us organize, simplify, and interpret information, thereby orienting us toward a particular set of expectations, attributions, and goals. Mindsets predispose us toward a particular way of experiencing and responding to situations. Because of the complexity and ambiguity of life, people can have very different mindsets about aspects of themselves and the world––and these mindsets can have significant consequences.
Decades of psychological research show that mindsets are critical yet often overlooked factors influencing individuals' motivation, behavior, and performance (e.g., mindsets about intelligence) [16]. More recently, an emerging body of research suggests that mindsets about aspects of health-relevant behaviors and processes––such as stress [14, 17], diet [18, 19], and aging [20]––can shape their effects on health and wellbeing.
In the context of physical activity, initial research suggests that people hold mindsets about their physical activity level's adequacy and its corresponding health consequences (activity adequacy mindsets, AAMs) [21]. These mindsets are based partly on individuals' actual physical activity. However, they are often not a mere reflection of one's objective activity levels. For example, even among individuals who get the same objective amount of physical activity, some may believe that their activity level is adequate and benefits their health (i.e., adequate activity mindset). In contrast, others may believe that their activity is inadequate and harms their health (i.e., inadequate activity mindset). Individuals' AAMs may significantly affect their health, wellbeing, and even longevity, regardless of their actual physical activity. In epidemiological research, data from three nationally representative samples showed that people who perceived themselves as less active than other people their age (a proxy for the inadequate activity mindset) had an up to 72% higher mortality risk 21 years later than those who perceived themselves as more active, controlling for actual amounts of activity (assessed through comprehensive self-report questionnaires and objective accelerometer data) [22]. Similarly, perceived physical activity relative to others predicts cognitive function in older adults [23]. The opposite, perceived sedentary behavior relative to others, is associated with psychological stress [24].
In experimental research, one study examined a sample of hotel room attendants, who objectively met physical activity guidelines through their work, but still perceived themselves as inactive because they were unaware that their work counted as exercise. An intervention informing room attendants that their work constituted adequate exercise resulted in reduced weight, body fat, and blood pressure one month later, compared to a control group [25]. Another study [21] investigated the effects of viewing the official U.S. physical activity guidelines (prescribing a relatively high amount of activity) compared to guidelines that prescribed a lower amount of activity on AAM. Individuals exposed to guidelines prescribing a lower amount of physical activity adopted more adequate activity mindsets, which in turn predicted greater self-efficacy, engagement in physical activity, and perceived health 1 week later. Moreover, a meta-analysis comparing the effects of exercise training and placebo-exercise training (i.e., types of exercise without a known pharmacological, biochemical, or physical mechanism of action) showed that the mere

pharmacological, biochemical, or physical mechanism of action) showed that the mere belief that one is engaging in exercise accounted for half of the psychological benefits of exercise (e.g., reduced anxiety and depression) [26]. Presumably, these effects occurred because participants had adequate activity mindsets and thus expected wellbeing benefits.

Though these studies provide suggestive evidence that AAMs may affect health and wellbeing, others have yielded less promising results. In particular, one intervention failed to induce positive changes in mindsets about physical activity [27], and another was unable to produce effects on health outcomes in healthy adolescents [28]. Moreover, research and public attention on the important effects of actual physical activity behavior on health has continued to predominate [1], at the expense of the insight that mindsets may also matter."

"The basic idea behind wearable activity trackers is simple: help users get adequate physical activity by providing feedback about their progress towards specific activity goals (e.g., 10,000 steps a day, standing for at least 1 minute during 12 hours of the day, or exercising for a target number of minutes). Much research attention has been devoted to eHealth and mHealth interventions to promote physical activity [43], and commercial high-end wearables now also incorporate other behavior change techniques (BCTs) such as highlighting the discrepancy between current behavior and goal, biofeedback, social comparison and social support [13]. Unfortunately, the evidence about activity trackers' effectiveness is inconclusive. Some meta-analyses find improvements in physical activity [9] and body weight [44], but others show no or even pernicious effects when comparing wearable-based interventions to alternative interventions (rather than inactive controls) [10, 11, 45]."

"AAMs have the potential to improve health and wellbeing, but to date, interventions to leverage AAMs at scale are lacking. First, to establish causal effects, research has used deceptive methods to manipulate mindsets [21], which would be unethical outside of the research context. Second, a high level of specificity makes interventions challenging to scale. For example, the intervention informing room attendants that their work satisfies exercise guidelines [25] cannot be adapted to less physically demanding jobs and neglects other aspects of a person's lifestyle (e.g., carrying children). Third, interventions teaching participants explicitly to adopt a mindset (rather than inducing it stealthily) have shared information about the content of the desirable mindset (e.g., "my work is good exercise"), but not about mindsets per se (e.g., "assuming that my physical activity is inadequate is a mindset that is not necessarily true") or their effects (e.g., "my mindsets can influence my health and performance"). Interventions lacking such meta-cognitive knowledge about mindsets may be less likely to stick in the long run when individuals' lifestyles change, or environments present inconsistent information."

"There is initial evidence for the effectiveness of meta-mindset interventions. In one study, employees were taught that stress can have both debilitating and enhancing effects and that stress mindsets can influence the effects of stress in a self-fulfilling manner. This intervention enabled participants to adopt a stress-is-enhancing mindset and improved their physical health, health satisfaction, and work performance [46]. Another intervention successfully encouraged students to deliberately adopt a growth mindset about

2b) In INTRODUCTION: Specific objectives or hypotheses

Does your paper address CONSORT subitem 2b? *

Copy and paste relevant sections from the manuscript (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

"This research explores four questions arising from the theory and evidence reviewed above. First, we examine if receiving step count feedback from a wearable tracker (here, Apple Watch) affects activity adequacy mindset (AAM). Second, we experimentally manipulate step count feedback with the intent of inducing different levels of AAM and thereby investigate whether AAMs causally influence health and wellbeing (e.g., weight and blood pressure; anxiety and depression; ability to engage in everyday tasks) independently of how active individuals actually are. Third, we explore AAMs' effects on several affective and behavioral determinants of health (e.g., positive and negative affective experiences; physical activity and diet). Fourth, we test the effectiveness of a meta-mindset intervention designed to empower individuals to deliberately adopt AAMs that can benefit their health and wellbeing."

METHODS

3a) Description of trial design (such as parallel, factorial) including allocation ratio

Does your paper address CONSORT subitem 3a? *

Copy and paste relevant sections from the manuscript (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

"Design and manipulations. This study used a parallel trial design (allocation ratio 1:1:1:1). Participants were assigned to one of four conditions––(1) accurate step count (n = 41), (2) deflated step count (n = 40), (3) inflated step count (n = 40), or (4) meta-mindset intervention plus accurate step count (n = 41)––via criteria-based randomization (CBR) [49, 50]. Week 1 was a baseline week, during which no step count feedback or interventions were delivered. The meta-mindset intervention was delivered on day 7, and the Apple Watch step count was displayed to all participants starting on day 8."

3b) Important changes to methods after trial commencement (such as eligibility criteria), with reasons

Does your paper address CONSORT subitem 3b? *

Copy and paste relevant sections from the manuscript (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

not applicable, as there were not important changes to methods after trial

3b-i) Bug fixes, Downtimes, Content Changes

Bug fixes, Downtimes, Content Changes: ehealth systems are often dynamic systems. A description of changes to methods therefore also includes important changes made on the intervention or comparator during the trial (e.g., major bug fixes or changes in the functionality or content) (5-iii) and other “unexpected events” that may have influenced study design such as staff changes, system failures/downtimes, etc. [2].

	1	2	3	4	5

Does your paper address subitem 3b-i?

Copy and paste relevant sections from the manuscript (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

There were no significant bugs to report

4a) Eligibility criteria for participants

Does your paper address CONSORT subitem 4a? *

Copy and paste relevant sections from the manuscript (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

"To be eligible to participate, they had to meet the following criteria assessed via a web-based prescreen survey: walking as the primary source of physical activity in the prior six months (to ensure relevance of the step count manipulation); health status allows engagement in physical activity according to the Physical Activity Readiness Questionnaire [49]; not pregnant (as natural changes in weight and body composition during pregnancy would invalidate results); possession of an iPhone 5 S or newer (to allow connecting an Apple Watch); and limited exposure to activity tracking technology or apps (to ensure participants were naïve to their daily step count)."

4a-i) Computer / Internet literacy

Computer / Internet literacy is often an implicit “de facto” eligibility criterion - this should be explicitly clarified.

	1	2	3	4	5	
subitem not at all important	○	○	○	○	○	essential

Does your paper address subitem 4a-i?

Copy and paste relevant sections from the manuscript (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

Computer/ internet literacy was an implicit eligibility criterion as participants had to complete "a web-based prescreen survey" and possess "an iPhone 5 S or newer (to allow connecting an Apple Watch)"

4a-ii) Open vs. closed, web-based vs. face-to-face assessments:

Open vs. closed, web-based vs. face-to-face assessments: Mention how participants were recruited (online vs. offline), e.g., from an open access website or from a clinic, and clarify if this was a purely web-based trial, or there were face-to-face components (as part of the intervention or for assessment), i.e., to what degree got the study team to know the participant. In online-only trials, clarify if participants were quasi-anonymous and whether having multiple identities was possible or whether technical or logistical measures (e.g., cookies, email confirmation, phone calls) were used to detect/prevent these.

Copy and paste relevant sections from the manuscript (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

"Participants were a diverse sample of 162 West-Coast community-dwelling adults, recruited via flyers and online platforms (i.e., Craigslist, Nextdoor). To be eligible to participate, they had to meet the following criteria assessed via a web-based prescreen survey"
"Each participant attended a personal onboarding and offboarding session at the start and end of their 5-week study participation (Fig. 1). Experimenters were blind to participants' experimental condition."
"Throughout the following 5 weeks, participants' step count was tracked by the Apple Watch. Additionally, participants completed weekly web-based surveys assessing affective and behavioral processes and daily check-ins to ensure step count awareness. One researcher monitored participants' survey response rates and watch activity to ensure study adherence. When step counts had not been updated to the cloud database for an extended time, researchers communicated with participants via text message or email to remind them to wear the watch or assist with any technical issues. At the end of the 5 weeks, participants returned for the offboarding session, completing the same measures as in the onboarding session."

4a-iii) Information giving during recruitment

Information given during recruitment. Specify how participants were briefed for recruitment and in the informed consent procedures (e.g., publish the informed consent documentation as appendix, see also item X26), as this information may have an effect on user self-selection, user expectation and may also bias results.

"The posting advertised an opportunity to participate in a paid research study to develop more effective fitness trackers."
"Participants were briefed with the cover story that the study aimed to develop more accurate fitness tracking algorithms. They then provided informed consent (footnote: Full consent procedures and form available in supplemental materials.) and received a handout explaining the benefits of walking for health and wellbeing, anchoring them on the idea that every additional step is valuable, even at low physical activity levels. Participants were also instructed to use only the AccuSteps app for physical activity information and to wear the Apple watch every day (except when sleeping, showering, or swimming). They then completed psychological and physiological assessments."
"At the end of the 5 weeks, participants returned for the offboarding session, completing the same measures as in the onboarding session. They were then fully debriefed, thanked, and paid $175 for satisfactory participation. "

4b) Settings and locations where the data were collected

Copy and paste relevant sections from the manuscript (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

Participants did not have to pay for any accesses. They were provided access to the app and web-based surveys by the experimenters. They were paid for study participation.
"In the onboarding session, participants received an Apple Watch Series 1 equipped with “AccuSteps”, a step-tracking app developed by the research team that can collect and manipulate a user’s step count and ambiently displays that information as a widget on the watch face."
"They were then fully debriefed, thanked, and paid $175 for satisfactory participation."

5-viii) Mode of delivery, features/functionalities/components of the intervention and comparator, and the theoretical framework

Describe mode of delivery, features/functionalities/components of the intervention and comparator, and the theoretical framework [6] used to design them (instructional strategy [1], behaviour change techniques, persuasive features, etc., see e.g., [7, 8] for terminology). This includes an in-depth description of the content (including where it is coming from and who developed it) [1],” whether [and how] it is tailored to individual circumstances and allows users to track their progress and receive feedback” [6]. This also includes a description of communication delivery channels and – if computer-mediated communication is a component – whether communication was synchronous or asynchronous [6]. It also includes information on presentation strategies [1], including page design principles, average amount of text on pages, presence of hyperlinks to other resources, etc. [1].

"This research explores four questions arising from the theory and evidence reviewed above. First, we examine if receiving step count feedback from a wearable tracker (here, Apple Watch) affects activity adequacy mindset (AAM). Second, we experimentally manipulate step count feedback with the intent of inducing different levels of AAM and thereby investigate whether AAMs causally influence health and wellbeing (e.g., weight and blood pressure; anxiety and depression; ability to engage in everyday tasks) independently of how active individuals actually are. Third, we explore AAMs' effects on several affective and behavioral determinants of health (e.g., positive and negative affective experiences; physical activity and diet). Fourth, we test the effectiveness of a meta-mindset intervention designed to empower individuals to deliberately adopt AAMs that can benefit their health and wellbeing."
"participants received an Apple Watch Series 1 equipped with "AccuSteps", a step-tracking app developed by the research team that can collect and manipulate a user's step count and ambiently displays that information as a widget on the watch face."
"Design and manipulations. This study used a parallel trial design (allocation ratio 1:1:1:1). Participants were assigned to one of four conditions––(1) accurate step count (n = 41), (2) deflated step count (n = 40), (3) inflated step count (n = 40), or (4) meta-mindset intervention plus accurate step count (n = 41)––via criteria-based randomization (CBR) [49, 50]. Week 1 was a baseline week, during which no step count feedback or interventions were delivered. The meta-mindset intervention was delivered on day 7, and the Apple Watch step count was displayed to all participants starting on day 8.
Step Count Feedback Manipulations. After the no-feedback baseline week, participants in the accurate step count condition started to view their step count as recorded by the Apple Watch (Fig. 2). This condition allowed us to examine whether simply wearing an activity tracker and receiving step count feedback (vs. no feedback) was associated with changes in AAM and other outcomes. After the baseline week, participants in the deflated and inflated step count conditions started to view their step count, as recorded by the Apple Watch but automatically deflated or inflated by 40% (respectively) by our AccuSteps app. All participants believed that they were receiving their accurate step count (confirmed by post-study interviews).
Meta-Mindset Intervention. The meta-mindset intervention was included in the first weekly survey and consisted of three videos and reflection activities. The 3-5-minute-long videos informed participants about health-related mindsets in general, AAMs in particular, and how mindsets can create self-fulfilling effects. The reflection activity prompted participants to notice any activities they had done in the last week that took some physical effort (e.g., walking, housework, and other activities they might not usually think of as exercise). Next, they were asked to count all of these activities as beneficial exercise and celebrate themselves for this physical activity. The final component encouraged people to think about their activity's short- and long-term benefits (e.g., improved mood, sleep; lower blood pressure, protection from heart disease). Participants completed a short version of this reflection activity in each subsequent daily check-in and weekly survey. See supplemental materials for details."

5-ix) Describe use parameters

Describe use parameters (e.g., intended “doses” and optimal timing for use). Clarify what instructions or recommendations were given to the user, e.g., regarding timing, frequency, heaviness of use, if any, or was the intervention used ad libitum.

	1	2	3	4	5

Does your paper address subitem 5-x?

Copy and paste relevant sections from the manuscript (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

"Each participant attended a personal onboarding and offboarding session in a laboratory of the Computer Science department at the start and end of their 5-week study participation (Fig. 1). Experimenters were blind to participants' experimental condition. In the onboarding session, participants received an Apple Watch Series 1 equipped with "AccuSteps", a step-tracking app developed by the research team that can collect and manipulate a user's step count and ambiently displays that information as a widget on the watch face. Participants were briefed with the cover story that the study aimed to develop more accurate fitness tracking algorithms. They then provided informed consent and received a handout explaining the benefits of walking for health and wellbeing, anchoring them on the idea that every additional step is valuable, even at low physical activity levels. Participants were also instructed to use only the AccuSteps app for physical activity information and to wear the Apple watch every day (except when sleeping, showering, or swimming). They then completed web-based psychological assessments and the experimenter took physiological assessments.
Throughout the following 5 weeks, participants' step count was tracked by the Apple Watch. Additionally, participants completed weekly web-based surveys assessing affective and behavioral processes and daily check-ins to ensure step count awareness. One researcher monitored participants' survey response rates and watch activity to ensure study adherence. When step counts had not been updated to the cloud database for an extended time, researchers communicated with participants via text message or email to remind them to wear the watch or assist with any technical issues. At the end of the 5 weeks, participants returned for the offboarding session, completing the same measures as in the onboarding session. They were then fully debriefed, thanked, and paid $175 for satisfactory participation."

5-xi) Report any prompts/reminders used

Report any prompts/reminders used: Clarify if there were prompts (letters, emails, phone calls, SMS) to use the application, what triggered them, frequency etc. It may be necessary to distinguish between the level of prompts/reminders required for the trial, and the level of prompts/reminders for a routine application outside of a RCT setting (discuss under item 21 – generalizability).

Does your paper address subitem X26-ii?

Copy and paste relevant sections from the manuscript (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

Your answer

X26-iii) Safety and security procedures

Safety and security procedures, incl. privacy considerations, and any steps taken to reduce the likelihood or detection of harm (e.g., education and training, availability of a hotline)

	1	2	3	4	5	
subitem not at all important	○	○	○	○	○	essential

Does your paper address subitem X26-iii?

Copy and paste relevant sections from the manuscript (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

Your answer

RESULTS

13a) For each group, the numbers of participants who were randomly assigned, received intended treatment, and were analysed for the primary outcome

NPT: The number of care providers or centers performing the intervention in each group and the number of patients treated by each care provider in each center

Does your paper address CONSORT subitem 13a? *

Copy and paste relevant sections from the manuscript (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

Included in Methods and supplemental materials

13b) For each group, losses and exclusions after randomisation, together with reasons

Does your paper address CONSORT subitem 13b? (NOTE: Preferably, this is shown in a CONSORT flow diagram) *

Copy and paste relevant sections from the manuscript (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

Yes, the supplemental materials include details and a CONSORT diagram

13b-i) Attrition diagram

Strongly recommended: An attrition diagram (e.g., proportion of participants still logging in or using the intervention/comparator in each group plotted over time, similar to a survival curve) or other figures or tables demonstrating usage/dose/engagement.

	1	2	3	4	5	
subitem not at all important	○	○	○	○	○	essential

Does your paper address subitem 13b-i?

Copy and paste relevant sections from the manuscript or cite the figure number if applicable (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

The supplemental materials include a CONSORT diagram

14a) Dates defining the periods of recruitment and follow-up

Does your paper address CONSORT subitem 14a? *

Copy and paste relevant sections from the manuscript (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

"Participants were a diverse sample of 162 West-Coast community-dwelling adults, recruited via flyers and online platforms (i.e., Craigslist, Nextdoor) between 09/2017 and 09/2019. "
"5-week study participation"

14a-i) Indicate if critical “secular events” fell into the study period

Indicate if critical “secular events” fell into the study period, e.g., significant changes in Internet resources available or “changes in computer hardware or Internet delivery resources”

	1	2	3	4	5	
subitem not at all important	○	○	○	○	○	essential

Does your paper address subitem 14a-i?

Copy and paste relevant sections from the manuscript (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

Your answer

14b) Why the trial ended or was stopped (early)

Does your paper address CONSORT subitem 14b? *

Copy and paste relevant sections from the manuscript (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

not applicable to this study

15) A table showing baseline demographic and clinical characteristics for each group

NPT: When applicable, a description of care providers (case volume, qualification, expertise, etc.) and centers (volume) in each group

Does your paper address CONSORT subitem 15? *

Copy and paste relevant sections from the manuscript (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

Yes, Table S1 in the supplemental materials

15-i) Report demographics associated with digital divide issues

In ehealth trials it is particularly important to report demographics associated with digital divide issues, such as age, education, gender, social-economic status, computer/Internet/ehealth literacy of the participants, if known.

	1	2	3	4	5	
subitem not at all important	○	○	○	○	○	essential

Does your paper address subitem 15-i? *

Copy and paste relevant sections from the manuscript (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

Age, gender, education, race, employment and other characteristics are reported

16) For each group, number of participants (denominator) included in each analysis and whether the analysis was by original assigned groups

16-i) Report multiple “denominators” and provide definitions

Report multiple “denominators” and provide definitions: Report N’s (and effect sizes) “across a range of study participation [and use] thresholds” [1], e.g., N exposed, N consented, N used more than x times, N used more than y weeks, N participants “used” the intervention/comparator at specific pre-defined time points of interest (in absolute and relative numbers per group). Always clearly define “use” of the intervention.

	1	2	3	4	5	
subitem not at all important	○	○	○	○	○	essential

Does your paper address subitem 16-i? *

Copy and paste relevant sections from the manuscript (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

Not applicable, as only participants with near complete study participation were included in analysis

16-ii) Primary analysis should be intent-to-treat

Primary analysis should be intent-to-treat, secondary analyses could include comparing only “users”, with the appropriate caveats that this is no longer a randomized sample (see 18-i).

	1	2	3	4	5	
subitem not at all important	○	○	○	○	○	essential

Does your paper address subitem 16-ii?

Copy and paste relevant sections from the manuscript (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

Your answer

17a) For each primary and secondary outcome, results for each group, and the estimated effect size and its precision (such as 95% confidence interval)

Does your paper address CONSORT subitem 17a? *

Copy and paste relevant sections from the manuscript (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

Yes, included in the Results section

17a-i) Presentation of process outcomes such as metrics of use and intensity of use

In addition to primary/secondary (clinical) outcomes, the presentation of process outcomes such as metrics of use and intensity of use (dose, exposure) and their operational definitions is critical. This does not only refer to metrics of attrition (13-b) (often a binary variable), but also to more continuous exposure metrics such as “average session length”. These must be accompanied by a technical description how a metric like a “session” is defined (e.g., timeout after idle time) [1] (report under item 6a).

	1	2	3	4	5	
subitem not at all important	○	○	○	○	○	essential

Does your paper address subitem 17a-i?

Copy and paste relevant sections from the manuscript (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

Your answer

17b) For binary outcomes, presentation of both absolute and relative effect sizes is recommended

Does your paper address CONSORT subitem 17b? *

Copy and paste relevant sections from the manuscript (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

No binary outcomes are reported

18) Results of any other analyses performed, including subgroup analyses and adjusted analyses, distinguishing pre-specified from exploratory

Does your paper address CONSORT subitem 18? *

Copy and paste relevant sections from the manuscript (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

Results with and without covariate adjustments reported in supplemental materials

18-i) Subgroup analysis of comparing only users

A subgroup analysis of comparing only users is not uncommon in ehealth trials, but if done, it must be stressed that this is a self-selected sample and no longer an unbiased sample from a randomized trial (see 16-iii).

	1	2	3	4	5	
subitem not at all important	○	○	○	○	○	essential

Does your paper address subitem 18-i?

Copy and paste relevant sections from the manuscript (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

Your answer

19) All important harms or unintended effects in each group

(for specific guidance see CONSORT for harms)

Does your paper address CONSORT subitem 19? *

Copy and paste relevant sections from the manuscript (include quotes in quotation marks "like this" to indicate direct quotes from your manuscript), or elaborate on this item by providing additional information not in the ms, or briefly explain why the item is not applicable/relevant for your study

Yes, these are reported in the Results section

19-i) Include privacy breaches, technical problems

Include privacy breaches, technical problems. This does not only include physical “harm” to participants, but also incidents such as perceived or real privacy breaches [1], technical problems, and other unexpected/unintended incidents. “Unintended effects” also includes unintended positive effects [2].

Your answer

DISCUSSION

22) Interpretation consistent with results, balancing benefits and harms, and considering other relevant evidence

NPT: In addition, take into account the choice of the comparator, lack of or partial blinding, and unequal expertise of care providers or centers in each group

22-i) Restate study questions and summarize the answers suggested by the data, starting with primary outcomes and process outcomes (use)

Restate study questions and summarize the answers suggested by the data, starting with primary outcomes and process outcomes (use).

See Discussion, Areas for Future Research subsection

20) Trial limitations, addressing sources of potential bias, imprecision, and, if relevant, multiplicity of analyses

20-i) Typical limitations in ehealth trials

Typical limitations in ehealth trials: Participants in ehealth trials are rarely blinded. Ehealth trials often look at a multiplicity of outcomes, increasing risk for a Type I error. Discuss biases due to non-use of the intervention/usability issues, biases through informed consent procedures, unexpected events.

See Discussion, Limitations subsection

21) Generalisability (external validity, applicability) of the trial findings

NPT: External validity of the trial findings according to the intervention, comparators, patients, and care providers or centers involved in the trial

21-i) Generalizability to other populations

Generalizability to other populations: In particular, discuss generalizability to a general Internet population, outside of a RCT setting, and general patient population, including applicability of the study results for other organizations

Your answer

21-ii) Discuss if there were elements in the RCT that would be different in a routine application setting

Discuss if there were elements in the RCT that would be different in a routine application setting (e.g., prompts/reminders, more human involvement, training sessions or other co-interventions) and what impact the omission of these elements could have on use, adoption, or outcomes if the intervention is applied outside of a RCT setting.

About the CONSORT EHEALTH checklist

As a result of using this checklist, did you make changes in your manuscript? *

- ○ yes, major changes
- ◉ yes, minor changes
- ○ no

What were the most important changes you made as a result of using this checklist?

Your answer

How much time did you spend on going through the checklist INCLUDING making changes in your manuscript *

Approximately three hours

As a result of using this checklist, do you think your manuscript has improved? *

- (●) yes
- ( ) no
- ( ) Other:

Would you like to become involved in the CONSORT EHEALTH group?

This would involve for example becoming involved in participating in a workshop and writing an "Explanation and Elaboration" document

- ( ) yes
- (●) no
- ( ) Other:

Clear selection

Any other comments or questions on CONSORT EHEALTH

I found the lower and upper limits on responses somewhat frustrating. In the end I had to shorten my answers as my response was too large overall; this did not allow me to insert all the quotes that were asked for.
